

BC Widgets

The Business Central interface your team will enjoy using

A graphical user interface and dashboard extension for Business Central, from Braintree.
Configured by you, not a developer.

Standard Business Central role centres are functional and generic but not always intuitive for new or occasional users, and hard to personalise without a developer. Touch-screen use is an afterthought, not a design goal. And building even a simple dashboard of the numbers that matter most usually means a report-writer request and a wait.

WHAT BC WIDGETS DOES

A friendlier Business Central, set up your way

- ☒ **Preconfigured pages for every module.** A ready-to-use graphical page for each Business Central module, out of the box, covering all core business operations.
- ☒ **Self-service layouts and colour schemes.** Choose from 8 preconfigured colour schemes, or configure page layouts and branding yourself. No developer required.
- ☒ **Custom dashboards.** Build dashboards that surface the key information each user needs.
- ☒ **Configurable fields on core records.** Generic fields added to vendor, customer and item pages, with names, visibility and content you control.

WHY BC WIDGETS

Why teams choose BC Widgets

Purpose-built for Business Central

Replaces or runs alongside the standard role centre. Not a separate app to log into.

Built for how people work

Touch-screen friendly, personalised per user, and faster to learn and adopt.

Part of a broader toolkit

A companion product to Braintree's FastTrack.

Local delivery and support

Delivered and supported locally by Braintree, your Business Central partner: one relationship, one point of contact.

WHO IT'S FOR

Any Business Central customer looking for a more intuitive interface for their users, particularly smaller businesses that want essential functionality front and centre, teams using touch-screen devices, and anyone who wants a personalised dashboard without a developer.

Get started

Talk to your Braintree account manager or Business Central consultant about adding BC Widgets to your environment.

Let's grow.
